

## Abstract

[Problem] To provide a mobile phone having a broadcast receiving function that can promptly preset a receiving frequency depending on areas, and easily receive a broadcast of a broadcast station having the receiving frequency, even when a user moves around for a pleasure or business trip.

[Solution] A mobile phone 100 having a broadcast receiving unit that receives a broadcast, including: a memory 106 operable to store position information of a base station corresponding to a receiving frequency of a broadcast station receivable in an area indicated by the position information; and a control unit 105 operable to acquire the position information of the base station, judge whether the acquired position information is stored in the memory 106, and when stored, read a receiving frequency corresponding to the acquired position information, and instruct the broadcast receiving unit to receive a broadcast of the broadcast station having the receiving frequency.
